NEW & AVAILABLE!

THE WORLD’S FIRST 20 GAIN FRONT PROJECTION DISPLAY!

TRaC Associates is now shipping the astonishingly bright LUMIN Silver Ultra. The world’s first 20 Gain front projection display!

Displays are available in three versions, either framed, un-framed, or on a motorized roll.

Display sizes extend to 250” diagonals (16.5’ x 12.5’) and beyond (customized)!

Designers will enjoy the performance and flexibility as this unique front projection display is available in virtually any aspect ratio and can be shaped and formed to meet most needs.

The LUMIN Silver Ultra is resolution independent and designed for today’s high resolution DLP/LCD digital projectors.

The display has a homogeneous, non-structured display surface which is tough, resistant to scratching, and weatherproof, while still providing vivid, dynamic images.

Delivering IMPACT—LUMIN Silver Ultra

The LUMIN Silver Ultra is the newest addition to a growing line of hi-Gain, specialty projection displays manufactured by LUMIN Vision. It is made utilizing an extremely light intense Optical Polymer technology.

Other LUMIN displays include the LUMIN PowerVu which is a

20 Gain, rear projection foil. And the LUMIN 2-Way.

LUMIN projection displays are designed for optimum performance in most high environmental light applications.

BRIDGING THE GAP

If content is “king,” then the viewer interface is “queen.” Great content demands the great presentation of bright and beautiful images!

No technology delivers the cost effective performance of the new breed of projection displays. They bridge the gap

between the low end white matte screens and today’s plasma and LCD displays.

People respond to “big” and “bright.” Specialty projection displays deliver both, and they are not limited in size & resolution unlike electronic displays. They are more at-

tractive and offer higher performance than the low-end market.

Expand your customer’s creative options and application flexibility. Consider TRaC’s specialty displays on your next project. Save money and deliver astonishing images!
